# The research in AI & Project Management continues.
Unique opportunity to participate!

AI in Project Management

In today's increasingly projectified economy, the most forward-thinking organizations know that the success of their strategies hinges on how well they can execute projects. And the race toward AI mastery is no exception.

Source: AI @ Work: New Projects, New Thinking (2019)

In May - June 2022, PMI Sweden did an Online survey to understand the knowledge, experience and adoption of Artificial Intelligence amongst members. Link to report bit.ly/3mNkvUy.

The survey and report was made in collaboration with PMI Rio de Janeiro and published in October 2022.

Some key takeaways from the survey:

- The adoption of AI in project management is warming up, 74% had just started their AI journey,
- 28% had some hands-on experience.
- About 70% of the respondents said the companies they work for have plans to implement AI.

This shows that there is a big gap between demand and supply of AI knowledge and experience. This result is in line with research reports from e.g., McKinsey, Bain and PMI.org.

Next steps

PMI Sweden Chapter Board and PMI Rio de Janeiro Board are proud to announce the decision to fully endorse the proposal to continue the research in AI and project management.

Increased scope of the survey

We will follow up the survey from May - June 2022, adding more countries, demographics and more in-depth questions.

Answer the questions When, What and How

Examples of questions to be answered:
- When to choose AI instead of other technologies?
- What different types of AI solution projects are there and what competencies are needed in respective type?
- What do I need to think about as Project Manager before starting an AI project?

Case studies

Together with PMI and the Project Management community we will share some real life case studies.

Result

Will be presented in a report and at the Passion for Projects Congress in Helsingborg 11-12 March 2024.

Leading this next step initiative:

Marly Nilsson, PMI Sweden and Bruno Rafael Santos, PMI Rio de Janeiro

Unique opportunity to participate!

If you are a PMI member and would like to participate and contribute to this very exciting and important project, respond to the survey or as a company share experience in AI projects, please send an email before the 1st of June to: ai@pmi-se.org

Best regards

PMI Sweden Chapter &
PMI Rio de Janeiro Chapter

Marly NIlsson
Marly is a volunteer at PMI Sweden and has many years of experience as Business Consultant working in multinational companies in cross-functional software development projects. She is certified in Business Management IHM, PMP and holds several certifications in Artificial Intelligence issued by Helsinki University and MIT Sloan School of Business.
